

NANO CALCIUM CARBONATE

Chemical Name : Nano Calcium Carbonate

Property : White fine powder, particle surface covered by active substance, high dispersibility for organic polymers.

Uses : Nano active calcium carbonate is used as filler in silicone rubber and adhesive. The purpose of filling is to improve processing and reduce costs.

Packing : Composite plastic woven bag, 25KG/bag

Chemical Name : Nano Calcium Carbonate

Property : White fine powder, particle surface covered by active substance, high dispersibility for organic polymers.

Uses : Nano active calcium carbonate as filler in rubber, ink, paints and edge banding. The purpose of filling is to improve processing and reduce costs.

Packing : Composite plastic woven bag, 25KG/bag

Chemical Name : Nano Calcium Carbonate

Property : White fine powder, particle surface covered by active substance, high dispersibility for organic polymers.

Uses : Nano active calcium carbonate It can replace nano barium sulfate in plastic transparent film. It can also be used for wire drawing, injection molding, PVC, PE, PP and other profiles, pipes, plates, etc., as a reinforcing agent

Packing : Composite plastic woven bag, 25KG/bag
